

Streamlining Expense Management with ClickUp at L5

How L5 streamlined expense management in ClickUp, replacing the manual monthly close with automated, recurring, real-time tracking.

L5 Team

December 1, 2023

Reshaping a cumbersome Excel process into an efficient, cloud-based solution.

Opportunity

A surveillance services company faced challenges managing expense reports submitted by team members using corporate credit cards. Based on Excel spreadsheets, the process was time-consuming and error-prone, requiring monthly reminders for expense submissions, tracking payments, and handling reimbursement requests. With a distributed workforce and employees working on remote customer sites, the company needed a more efficient and accessible solution.

Solution

L5 implemented ClickUp as the new expense management platform. This solution included recurring monthly tasks for team members to submit expenses, an approval cycle for reimbursements, and automated tracking of overdue expense reports. In addition, the cloud-based platform enabled access through mobile devices and handheld devices, catering to the remote workforce's needs.

Results

The migration to ClickUp's cloud-based platform significantly improved the company's expense management process. By eliminating the cumbersome Excel-based approach, the company reduced errors and saved valuable time for both employees and the accounting team. Monthly reminders and automated tracking features increased compliance with expense report submissions and reimbursements. The platform's mobile accessibility proved a significant benefit for the organization. It allowed its distributed workforce to manage expenses quickly and efficiently, even on remote customer sites.

This successful implementation of ClickUp for expense management improved organization and streamlined financial operations.
